Professions of the future: how to find your place in the labor market

Decide on the future profession is difficult. It is always a difficult stage for a schoolboy and parents. The choice of specialties and directions is huge, moreover, today the reality is changing around more than ever, constantly appear new professions and become unclaimed already familiar.

Experts suggest that by 2030, professions will become many times more. At the same time, those who will be in demand, today still do not exist. Hence the complexity: how to choose a specialty, if there is no idea about future professions? But the way to find your direction and not make a mistake in the choice still there. It consists in tracking the trends that already exist and are still outlined in the world around. Environmental Protection and Climate Change

One of the global world-class issues today and in the future is associated with climate change and its influence on the global economy. Governments and enterprises of different countries begin to invest in green technologies and other ways to prevent environmental disasters. Therefore, it will be reasonable to expect jobs related to the solution of such tasks, much more. This suggests that graduates of natural science and engineering specialties will be particularly popular. There is even such a direction of training as environmental engineering, which is engaged in environmental issues.

Environmental problems also make a valuable education in the areas of public health and economics. Climate change may have negative impact on human health, so the fight against them has a priority value. Education in the spheres of biology, geography and sociology gives a deep understanding of environmental problems, thereby preparing students to a variety of professions that may appear in this area in the future. Artificial Intellect and Robots

The growing role of technologies in all spheres of the daily life of a person gives rise to the need for qualified engineers. The use of artificial intelligence in mass consumption technologies has already become quite ordinary, but its use is almost endless and not fully mastered. Today, many universities offer to get a diploma in the specialty artificial intelligence. The advantage of this direction of learning is its in demand in different areas: in finance, in banking business, business. The study of artificial intelligence will discover a lot of new opportunities for the future student. We will need not only developers, but also specialists who are versed in an artificial intelligence device and capable of preventing any potential hazards associated with its use.

The same can be said about robotics, relatively young science. According to experts, much of what a person makes today, in the future will be performed by robots. Therefore, robotics

The win-win option for anyone who wants to secure your career from the surprises of the future!
Video Games and Social Networks

In digital space, there is a huge amount of data. Therefore, the study of large data will help start an impressive career. Separately, it is worth saying about social networks and video games. Today is social network

An integral part of everyone's life, although some 15 years ago they did not even exist. It is difficult to predict how social networks will change in the future, but one exactly

Their appearance and rapid development has already changed our world forever. The social network in general and digital media in particular represent a good choice for those who want to work in an exciting, rapidly developing industry.

The study of digital marketing, digital culture and social networks has a narrower direction than the study of simply marketing, and will allow you to purchase specialized knowledge. Rights popularity and video games. Therefore, it is not surprising that their development can now be studied at the university, acquiring knowledge and skills necessary for work in this fascinating industry. Should I choose a narrow specialty?

There are now loud discussions on what specialties are better: narrow or wide-profile. On the one hand, the above examples show the demand of profile knowledge and specialists. On the other hand, as some experts assure, it's time to stop correlate the areas of preparation with specific posts. University graduates are increasingly working in a specialty, and this trend will certainly continue.

Be that as it may, it is becoming increasingly necessary for further labor implementation that is becoming more and more necessary for further labor implementation. According to experts, for 65% of professions it will be necessary to education above average. But even it will not be enough to maintain the status of a highly qualified specialist. In a world where everything changes with dizzying speed, everything that is taught at the university, becomes less than 10 years after the release. Therefore, training should be publicly available and continuous for continuous development.
